³ Blackleg Vaccination	2 ml dose	UltraChoice® 7 or 8, Vision 7 or 8®, Calvary 9® Or any variation of these products
Deworm	Rotate chemical class	Ivermectin®, Cydectin®, Dectomax®, LongRange®, Valbazen®, Safe-Guard® (no generic products allowed)
Palpate herd	-----	-----

¹ Optional but preferred for calves. Prior to use, cows of suckling calves must have received the same product within the past 12 months.

² Calves must receive 2 rounds of a product that contains all 5 components of the Viral Respiratory Complex (IBR, PI₃, BRSD, BVD type 1 & 2) prior to shipping. This can be accomplished prior to or during preconditioning.

³ Cows are now required to be vaccinated for both Blackleg and the Viral Respiratory Complex. It is preferred and HIGHLY Recommended that the cow herd is vaccinated with a MLV Viral Respiratory. Before implementing this; visit with a Livestock Consultant, Veterinarian or pharmaceutical sales representative of the product you will use.
